Professional Summary

Multi-disciplinary **Data Analyst and Automation Engineer** with experience spanning software quality assurance and data science. Skilled in **Python**, **SQL**, **R** and advanced analytics for extracting actionable insights from complex datasets. Demonstrated history of building and maintaining **automation frameworks** using **Selenium** and **TestNG**, while concurrently pursuing an MSc in Data Science & Analytics. Adept at designing **ETL pipelines**, performing **statistical and machine-learning analysis**, creating **interactive dashboards**, and translating business requirements into efficient automated test scenarios. Proven ability to work in Agile teams, mentor colleagues and communicate technical results to both technical and non-technical stakeholders.

Skills

- **Automation Tools & Frameworks:** Selenium WebDriver (UI & API), Playwright, TestNG, JUnit, PyTest, Maven, Cucumber (BDD), Ginger, SoapUI, Postman.
- **Programming Languages & Databases:** Java, Python, JavaScript, SQL/MySQL).
- **DevOps & CI/CD:** Jenkins, GitLab, GitHub, Docker, Kubernetes, Kafka, CI/CD pipeline implementation.
- **Test Management & Defect Tracking:** Azure DevOps, Jira, iTrack, Zephyr, HP ALM, Confluence.
- **Testing Methodologies:** SDLC, STLC, Agile/Scrum, Waterfall, TDD/BDD/ATDD, performance testing, security testing, regression, integration, SIT, UAT, system testing, exploratory & usability testing.
- **Additional Tools & Technologies:** IntelliJ IDEA, Visual Studio, BrowserStack, Citrix, Amdocs CRM/CSM, BSS/OSS, Camunda, Linux/Unix, Putty.
- **Data Visualization:** Tableau, Looker, Power BI, Matplotlib, Seaborn, Plotly.
- **Soft Skills:** Collaborative team player, strong problem-solving and communication skills, adaptable and proactive.

Work History

Functional Test Engineer, 10/2021 to 07/2023
Amdocs Development Centre- BSSe – Pune, Maharashtra

- **Designed and developed Selenium-based automation frameworks** using TestNG and JUnit to support UI and API testing. Achieved a **40 % reduction in regression testing time** by replacing manual test execution with stable, reusable scripts.
- **Implemented an AutomateIT framework in Python** to convert REST-Assured API requests into XML, enabling the validation of **3 000+ API responses per week** and improving service validation speed.
- Led the **design and implementation of an automated regression suite**, reducing manual testing effort by **60 %** and providing rapid feedback during release cycles. Integrated the suite with Jenkins to enable scheduled and on-demand execution within CI/CD pipelines.
- **Streamlined continuous testing processes** by deploying Jenkins pipelines that triggered automated test runs, generated reports and delivered email notifications. This resulted in a

50 % reduction in manual effort and **90 % regression automation coverage**.

- Collaborated with cross-functional agile teams to **translate requirements into automated test scenarios** and **define test approaches** that mitigated risk. Provided mentoring and training to a team of 4–5 engineers on automation tools and best practices.
- **Executed back-end testing** using SQL queries and Unix/Linux commands to verify data integrity and system behaviors. Conducted data validation across Amdocs CRM, CSM and TDAS to ensure consistency across back-end systems before QA handoff.
- Managed defect tracking in **iTrack/Jira**, documenting and prioritizing issues. Achieved a **70 % reduction in critical defects** by driving root-cause analysis and early resolution.
- Authored comprehensive **test plans, scripts and execution reports**, improving accessibility and audit readiness by **30 %**. Adhered to quality assurance methodologies and controls to optimize coverage and enhance product reliability.

Education

Master of Data Science and Analytics with Advance Research | University of Hertfordshire, Hatfield, UK | 09/2023 – 08/2025

Relevant modules include:

- Foundations of Data Science (FDS), Neural Networks and Deep Learning, Data Mining, Applied Data Science and Analytics

Dissertation/ Project: Optimizing Dimensionality Reduction using Gaussian Random Projection and Sparse Random Projection for News Category Classification.

Bachelor of Technology in Computer Science Engineering | Siddharth Institute Engineering and Technology, Puttur, India | 08/2017 – 06/2021

Dissertation- IOT based gas leakage detection with enhanced security system and analyzing sensor data using Thing speak.

Certifications

- Successfully completed a **12-week certified course in "Internet of Things" (IoT)** from **NPTEL**, strengthening cross-domain knowledge in emerging technologies.
- Earned a **Certificate of Completion in Business Conduct Educational Process**, demonstrating commitment to corporate ethics and compliance.
- Received **AT&T Security Training Certification (2023)**, ensuring adherence to enterprise-grade security protocols in test environments.
